Million Dollars

Refer to 11 crops listed on pages 2-3

HIGHLIGHTS--1998 CROP YEAR

A cool, wet spring, followed by a drought reduced production of some field crops in 1998. Rainfall was near normal the latter part of July, August and the first part of September. Dry weather returned by mid-September and continued dry throughout the fall. Harvesting conditions for row crops were excellent. Tobacco and peanuts were the only row crops that showed a yield improvement from a year earlier. In fact, peanut yields were the highest since 1994. Problems from disease and insects were normal in 1998.

COTTON

The cool, wet spring delayed planting until mid-May when normal progress was reached. Then cotton crop suffered from the dry weather and heat during June and July. Harvest weather was very good. Yields averaged 578 pounds per harvested acre, down 68 from 1997 and the lowest yield since 1990. There were 1,280,000 harvested acres from the 1,370,000 acres planted in 1998. This compares with the 1,425,000 acres harvested in 1997. Georgia's production totaled 1,542,000 bales (480 lbs/net bale), down 20 percent from the 1,919,000 produced in 1997. The preliminary price for 1998 cotton lint was 67.4 cents per pound, compared with 67.7 cents per pound in 1997.

CORN

Weather was the main story of the 1998 corn crop. The cool, wet spring delayed planting, but beginning in late May, the weather turned hot and dry. The lack of moisture caused many farmers to abandon dryland acreage. Of the 500,000 planted acres, only 265,000 acres were harvested for grain. Corn harvested for grain experienced significantly decreased yields. Grain yields dropped 20 bushels an acre to 85 bushels per acre in 1998. Grain production totaled 22,525,000 bushels, down 52 percent from 1997. In order to salvage a crop, some grain producers harvested their corn as silage. Silage acres jumped 15,000 acres to 55,000. Silage yields dropped, averaging 10 tons per acre. Grain prices declined further in 1998 to a preliminary average of \$2.40 per bushel, down 50 cents per bushel from 1997.

PEANUTS

Peanut yields in 1998 rebounded from the previous year to average 2,815 pounds per acre. This yield was the highest since 1994. Production in 1998 totaled 1.51 billion pounds (755,827 tons). This production was up 13 percent from 1997. The higher production was the result of increased yields and acreage. Planted acres increased 4 percent to 540,000 acres, while harvested acres increased 3 percent to 537,000 acres. Yields averaged 2,815 pounds per acre, compared with 2,570 pounds in 1997. Preliminary prices averaged 26.6 cents per pound, before any GFA pool profits were distributed. Prices for the 1997 crop, including GFA profits, averaged 30.3 cents per pound. Georgia produced 38 percent of the Nation's peanuts in 1998.

TOBACCO

The tobacco crop got off to a slow start due to a cool spring, but benefitted from the dry conditions in June and early July. Production totaled 92.4 million pounds, a 4 percent increase from the 1997 crop. Yields averaged 2,200 pounds compared with 2,075 pounds per acre in 1997. The harvested acreage continued to decline, dropping 1,000 acres from 1997 to 42,000 acres. Prices held steady compared with the previous year. The 1998 crop averaged \$170.8 per hundred pounds, compared with \$171.2 in 1997. Total value of the 1998 tobacco crop increased to \$158 million compared with \$153 million in 1997.

SOYBEANS

The late planted crop got off to a slow start and could not recover from the hot and dry summer. Final yields averaged 21 bushels per harvested acre, the same as in 1997. The dry fall made for excellent harvesting conditions. Soybean acreage continued to decline, as only 300,000 acres were planted compared with 400,000 acres planted in 1997. Harvested acres were 220,000 acres compared with 380,000 harvested acres in 1997. Georgia's production fell to 4.62 million bushels, 42 percent less than 1997. Preliminary prices averaged \$5.35 per bushel, compared with \$6.68 per bushel in 1997.

SORGHUM

Sorghum planted for all purposes was at 50,000 acres in 1998. This compared with 65,000 acres in 1997. The acreage harvested for grain was 30,000 acres in 1998 and 40,000 acres in 1997. Yields averaged 38 bushels per acre, down seven bushel from 1997. Grain production totaled 1.14 million bushels, 37 percent less than a year earlier. Prices declined to \$2.00 per bushel. Sorghum harvested as silage was unchanged from 1997 at 15,000 acres. Silage yields averaged 9 tons per acre, one ton less than in 1997.

HAY

Hay production totaled 1.50 million tons, down 4 percent from 1997. The hot and dry summer contributed to the lower than normal yields. Yields averaged 2.3 tons per acre from all cuttings, down 0.30 tons from 1997. Acreage harvested was at 650,000 acres, 50,000 acres more than in 1997. Prices farmers received for hay sold averaged \$68.00 per ton, up \$9.00 per ton from 1997.

SMALL GRAINS

Wheat, oats and rye plantings for 1998 all declined from the previous year, as did harvested acres. The cool wet spring reduced small grain yields from 1997. Wheat was down one bushel from the previous year, while oats were off 3 bushels and rye was down one bushel from 1997.
